

Brainstorm & Idea Prioritization

Here we use this template to represent our problem statement and give our ides to prevent that. It gives workers to be work in trustable field. It helps to save so many peoples, workers, students and others life from fire Accidents.

Problem Statement

Without a Problem we can't get any inventions. Inventions are based on problems which we are faced in our daily life. Here we Take one problem in our day to day life and represent our ides.

Fire Detection Systems are now widely used in various safety and security applications. The major amount of firestarts due to the electric short circuit. It leads to damage to property and also loss of life. To avoid that or to minimize the damage caused by fire outbreaks due to electric short circuits an IoT technology is used to control such a kind of risk.

Traditional fire detection systems are not that effective and quick to alert the owner about fire, in case no one is present on the location. To overcome this problem in this paper we present the design and development of IoT based Fire Detection System. A system that combines qualities for fire, temperature and smoke detection, sending alert Text Message about the fire to the user along with onsite alarm(buzzer), updating temperature, humidity and smoke on ThingSpeak cloud every 15 seconds, and it also moves manually with the help of Android Application. The Fire Detection System consists of four main parts: Multiple sensors, communication system (Bluetooth, GSM, NodeMCU), motion planning (Manual patrolling), and Android application for manual patrolling of the system.

mperature, gas

Existence of emergency population warning methods	transferring messages through wireless technologies	Put up signs and contact information for emergencies	Provision of clear signage indicating exist routs and location of fire safety equipments	Software deigned to with stand harsh industrial conditions	Water tank with separate piping with hose reel to all the floors
Create node red flow to get data from devices	Creating an Emergency fre exit	If flame is detected sprinklers will be switched on automatically	Multi sensors are used to detect any changes in the environment	USE SPECIAL BLANKET FOR INSTANT FIRE	If any gases are present the exis fans are powered on
		Implementing		Cloudant DB	
Usage of Gas Detection system	Android application for manual patrolling of the system	adequate number of fire extinguishers in each block	PERSONAL EMERGENCY EVACUATION PLAN	nodes to store the recieved sensor data	A web page created to analyze the data an response extract conditionaly to launci water sprinklers

Brainstorm Group ideas

Take turns sharing your ideas while clustering similar or related notes as you go. Once all sticky notes have been grouped, give each cluster a sentence-like label. If a cluster is bigger than six sticky notes, try and see if you and break it up into smaller sub-groups.
